

## Advanced Dedicated Peer Server for Time Matters v10 in a Small Firm

Many smaller firms, with 5 users or less use the Professional version of Time Matters. These small firms using Pro usually store their Pro data and client documents on a paralegal's PC or a network attached storage (NAS) device. This paralegal's PC is not only responsible for servicing data requests from every user on the network, but it must also dedicate resources to the paralegal that uses it for their own work. This setup only works because the server requirements for Pro are so small. Unfortunately, this configuration contributes to slow, often troublesome systems.

With the release of v10 Lexis is moving everyone up to Enterprise because the Pro database technology is not as fast or reliable as SQL Server. So the good news for firms using Pro is that v10 will be faster and work more reliably due to the move to SQL. But this enhanced power comes with the requirement that you run SQL on a dedicated system for your Time Matters data.

Small firms may not have the budget to purchase a real server PC with a real server operating system. To enable these firms to benefit from the speed and power of v10 we offer a less expensive, but very capable option we call a Dedicated Peer Server. This is a PC that has been specifically configured for Time Matters v10 SQL data and storage of client documents. The Dedicated part means it is intended to act as a dedicated system where no staff member uses it for any other task. The Peer part means it is running the reliable XP Pro operating system, rather than a more complex and expensive real server operating system. These systems are all a typical small firm (five users or less) need to run Time Matters v10. Plus it has plenty of room to store your client files, documents and so on.

These Dell systems are custom configured for us with all the features you would expect like dual-core Intel Pentium CPU, 4GB of RAM, etc. They are covered by a Dell next business day onsite hardware warranty with options from 3-5 years. We also provide multiple hard disks in our systems to protect your firm and your client's data.

We also recommend a few optional features as well, like:

- An enhanced backup solution that includes a third, portable, 'Go' drive for offsite storage.
- A space-saving KVM+switch option that enables you to place this machine next to your secretary/office manager's PC and share their keyboard/mouse/video and network jack.
- An Antivirus software package that works well with Time Matters and comes in a very inexpensive 'all your PCs' site license. This enables you to run the same package with the same expiration date on all your systems.

Dell ships the systems to our offices where we mock up your firm's network configuration, then install and setup the system just like it is already in your office. We install and configure the OS, Microsoft SQL Server Express, user accounts, shares and your chosen backup options all offsite. You may choose to have your local CIC install and configure Time Matters for you, or if you prefer, we can take care of that for you as well while your new system is in our lab.

We ship your pre-configured turnkey Time Matters v10 system to your firm ready to plug in. Once you unbox it and plug it in, we remote in to help you migrate and convert your data. A quick remote configuration on your client PCs and you are ready to use Time Matters v10.

For firms with more than 5 users we also offer affordable 'real' server solutions as well. We will be glad to work with you on special requirements.

## **Advanced Dedicated Peer Server starting at \$1245**

We offer a “advanced” Dedicated Peer Server for the pre-configured turnkey price of \$1245.

This price includes a system with two mirrored (RAID 1) hard drives configured with 2 partitions. The first stores the OS, SQL data and your client data (documents, etc). The second is for your onsite backups. The second hard drive constantly mirrors the first providing live protection for your data as well as your backup files.

Microsoft SQL Server Express is preinstalled and configured on this system. It is ready for Time Matters installation by your IT staff or your local CIC. If you prefer we can optionally install your Time Matters v10 so it is ready to run when you open the box. If we install your Time Matters, we will configure the system with SQL backups set to automatically run at 11PM and store your backup data on the second drive.

The Advanced system includes a 5 year next business day onsite warranty from Dell. So you are covered if you have any hardware failure with your PC for 5 years. We can also support your system remotely when you have non-hardware related issues.

The Options estimate includes an enhanced backup option we recommend for offsite backups. It includes a third external hard drive that you can take with you as an offsite backup. The enhanced backup also includes software to backup a complete image of your system along with data, programs and configuration. Finally this option includes more software to backup your client files and a backup of your Time Matters backup files. Your turnkey system comes with these programs configured providing multiple layers of protection from the moment you plug in your new server.

The optional 22” wide screen LCD monitor with a 3 year warranty. You can use this monitor on your new server, or better yet put your old monitor on the server and use this new one on your own PC.

If you don't have room for an extra monitor our Options estimate includes a KVM switch and 5 port Ethernet switch. With these you can place your new server next to your existing workstation PC and share your keyboard, monitor and mouse between both systems.

Our Antivirus option enables you to standardize your office on one Antivirus solution with a common renewal date for a very inexpensive site license price.

Our Time Matters Installation and basic configuration estimate covers installation of your Time Matters v10 new install or upgrade on your server. This is done offsite so your Time Matters is up and running when you open the box. Once you receive your system, unbox it and plug it in, we will remote in to your office and help you convert your existing Time Matters data. We will remotely install Time Matters v10 on your workstations (estimated time should cover 3 workstations). This service makes Time Matters v10 available to you and your staff within just a few hours of you receiving your new server. *(NOTE: Additional time may be required if there are issues with your office configuration, or if you would like additional services performed. The estimated times will be sufficient to migrate Pro data and configure 3 workstations for a typical office setup.)*

Please contact us the questions about our estimates. We are happy to discuss your needs and goals for Time Matters and technology in your office. We can further customize our systems to meet your specific needs.

If your firm needs are greater than these 5 user systems are designed for, we can deliver turnkey systems built on fault tolerant server hardware with actual server operating systems. Just give us a call...
